Pre-course: JavaScript

JavaScript – Ex1- Hello AppleSeeds Academy

The following exercise contains the following subjects:

◆ JavaScript

◆ readline-sync

◆ console.log

Instructions - Setup

For the purpose of this pre-course we will use VS code as our IDE and we will run JavaScript inside a .js file.

1. Create a folder called exercises.

2. Name your js file throughout this course as the [exercise number].js So for this exercise name it ex1.js.

3. We will use a JavaScript library called "readline-sync" to get users input from the terminal and save it in a variable. See a brief introduction here.

4. To install the library we first need to initialize npm in our working directory. Type npm init in your exercises directory and hit enter until npm's setup is finished.

5. Install the JavaScript library.

6. To run your js file we will use our IDE terminal

   • In VS code go to view > Terminal.

   • Type node ex1.js in your terminal to run your file.

Instructions – Exercise

1. Ask the user for their name in the terminal.
2. Use the built in [log method](#) to log the message "Hello <Name>!" to your terminal.

Submit "ex1.js" to Hive.
